Introduction:

This is an ASP.NET 7 Minimal API C# and Angular 15 project. The function is list all the payer obtained of the API (https://www.balldontlie.io/api/v1/players) and save the favorites players. The favorites players are saved with the email entered and the player's id
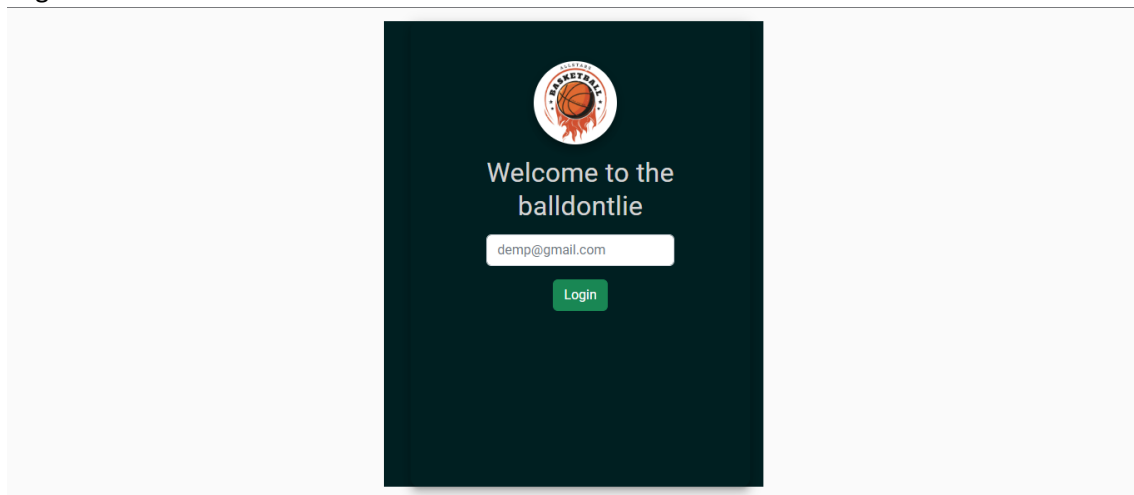

Technologies:

The project was developed with the follow technologies:

- Angular 15 (Frontend).
- SQLite (data persistence).
- .Net core 7 (Backend).
- Local storage to save the email (in the Login).
- Angular Material to the component design.
- Bootstrap 5 to styles.

Player's list:

Time expensed:

In order to develop the project, I used 3 hours to learn SQLite and update concepts in .Net core 7 (I had knowledge in .Net core 6) and Minimal API project. Then, I used 5 hours to develop the project using the technologies explained previously.
